Project StudioOne

User Story 1

Project Manager (Delivery & Coordination)

As a Project Manager on the Live Casino Product Team,
I want to oversee the end-to-end delivery of new studio environments, coordinating studio builds, infrastructure, and game integration work-streams,
so that new studios go live on time, within budget, and to the required quality standards,
while balancing structured planning and agile responses to change.

ACCEPTANCE CRITERIA:

- Clear project scope, delivery estimates, and timelines defined at initiation
- Cross-functional teams (product, design, business analysis, engineering) are aligned and communicating effectively
- Timelines, dependencies, and risks are tracked; blockers surfaced early
- Studio delivered in line with operational KPIs and company policies
- Go-live achieved with minimum disruption to operations and within agreed quality standards

User Story 2

Casino Operator (Branding & Go-to-Market)

As a Casino Operator,
I want to launch StudioOne under my own brand, with native-speaking presenters (German, Russian, Turkish) and a fully customized studio environment,
so that I can differentiate my live casino offering, retain players, and increase revenue without the cost and complexity of building my own studio.

ACCEPTANCE CRITERIA:

- Operator can apply their own logo, colors, and UI theme to the studio
- Native-speaking presenters (German, Russian, Turkish) are available and trained
- Integration with operator platform via REST API takes less than 4 weeks
- Operator receives dedicated account management and 24/7 technical support
- Player retention data is tracked and shared with the operator after launch

User Story 3

Player (Live Experience & Engagement)

As a Blackjack Player,
I want to play on a table with a charismatic, native-speaking presenter, HD video stream,
and less than 1 second latency,
so that I feel like I'm in a real casino, I trust the game is live and fair, and I want to come
back and play again.

ACCEPTANCE CRITERIA:

- Stream latency is consistently below 1 second under load
- Video quality is HD (720p or higher)
- Presenter speaks the player's language (German, Russian, or Turkish)
- Player can interact with the dealer via chat
- Real-time game history and betting stats are visible during the session
